Contents

Preface	x
Conference Committee	xiii
1 Validation and Verification	
Requirements and Concepts for Transaction Level Assertion Refinement <i>Wolfgang Ecker, Volkan Esen, Thomas Steininger, Michael Velten</i>	1
Using a Runtime Measurement Device with Measurement-Based WCET Analysis <i>Bernhard Rieder, Ingomar Wenzel, Klaus Steinhammer, Peter Puschner</i>	15
Implementing Real-Time Algorithms by using the AAA Prototyping Methodology <i>Pierre Niang, Thierry Grandpierre, Mohamed Akil</i>	27
Run-Time efficient Feasibility Analysis of Uni-Processor Systems with Static Priorities <i>Karsten Albers, Frank Bodmann, Frank Slomka</i>	37
Approach for a Formal Verification of a Bit-serial Pipelined Architecture <i>Henning Zabel, Achim Rettberg, Alexander Krupp</i>	47

2 Automotive Applications

- Automotive System Optimization using Sensitivity Analysis
Razvan Racu, Arne Hamann, Rolf Ernst 57
- Towards a Dynamically Reconfigurable Automotive Control
 System Architecture
*Richard Anthony, Achim Rettberg, Dejiu Chen, Isabell Jahnich,
 Gerrit de Boer, Cecilia Ekelin* 71
- An OSEK/VDX-based Multi-JVM for Automotive Appliances
*Christian Wawersich, Michael Stilkerich,
 Wolfgang Schröder-Preikschat* 85
- Towards Dynamic Load Balancing for Distributed Embedded
 Automotive Systems
Isabell Jahnich, Achim Rettberg 97

3 Hardware Synthesis

- Automatic Data Path Generation from C code for Custom
 Processors
Jelena Trajkovic, Daniel Gajski 107
- Interconnect-aware Pipeline Synthesis for Array based
 Reconfigurable Architectures
*Shanghua Gao, Kenshu Seto, Satoshi Komatsu,
 Masahiro Fujita* 121
- An Interactive Design Environment for C-based High-Level
 Synthesis
*Dongwan Shin, Andreas Gerstlauer, Rainer Dömer,
 Daniel D. Gajski* 135
- Integrated Coupling and Clock Frequency Assignment of
 Accelerators During Hardware/Software Partitioning
Scott Sirowy, Frank Vahid 145
- Embedded Vertex Shader in FPGA
*Lars Middendorf, Felix Mühlbauer, Georg Umlauf,
 Christophe Bobda* 155

4 Specification and Partitioning

- A Hybrid Approach for System-Level Design Evaluation
*Alexander Viehl, Markus Schwarz, Oliver Bringmann,
 Wolfgang Rosenstiel* 165
- Automatic Parallelization of Sequential Specifications for
 Symmetric MPSoCs
*Fabrizio Ferrandi, Luca Fossati, Marco Lattuada,
 Gianluca Palermo, Donatella Sciuto, Antonino Tumeo* 179
- An Interactive Model Re-Coder for Efficient SoC Specification
Pramod Chandraiah, Rainer Dömer 193
- Constrained and Unconstrained Hardware-Software Partitioning
 using Particle Swarm Optimization Technique
M. B. Abdelhalim, A. E. Salama, S. E.-D. Habib 207

5 Design Methodologies

- Using Aspect-Oriented Concepts in the Requirements Analysis
 of Distributed Real-Time Embedded Systems
*Edison P. Freitas, Marco A. Wehrmeister, Carlos E. Pereira,
 Flavio R. Wagner, Elias T. Silva Jr, Fabiano C. Carvalho* 221
- Smart Speed Technology™
Mike Olivarez, Brian Beasley 231

6 Embedded Software

- Power Optimization for Embedded System Idle Time in the
 Presence of Periodic Interrupt Services
Gang Zeng, Hiroyuki Tomiyama, Hiroaki Takada 241
- Reducing the Code Size of Retimed Software Loops under
 Timing and Resource Constraints
Noureddine Chabini, Wayne Wolf 255
- Identification and Removal of Program Slice Criteria for Code
 Size Reduction in Embedded Systems Abstract Communication
 Modeling
*Mark Panahi, Trevor Harmon, Juan A. Colmenares,
 Shruti Gorappa, Raymond Klefstad* 269

Configurable Hybridkernel for Embedded Real-Time Systems <i>Timo Kerstan, Simon Oberthür</i>	279
Embedded Software Development in a System-Level Design Flow <i>Gunar Schirner, Gautam Sachdeva, Andreas Gerstlauer, Rainer Dömer</i>	289
7 Network on Chip	
Data Reuse Driven Memory and Network-On-Chip Co-Synthesis <i>Ilya Issenin, Nikil Dutt</i>	299
Efficient and Extensible Transaction Level Modeling Based on an Object Oriented Model of Bus Transactions <i>Rauf Salimi Khaligh, Martin Radetzki</i>	313
Hardware Implementation of the Time-Triggered Ethernet Controller <i>Klaus Steinhammer, Astrit Ademaj</i>	325
Error Containment in the Time-Triggered System-On-a-Chip Architecture <i>R. Obermaisser, H. Kopetz, C. El Salloum, B. Huber</i>	339
8 Medical Applications	
Generic Architecture Designed for Biomedical Embedded Systems <i>L. Sousa, M. Piedade, J. Germano, T. Almeida, P. Lopes, F. Cardoso, P. Freitas</i>	353
A Small High Performance Microprocessor Core Sirius for Embedded Low Power Designs, Demonstrated in a Medical Mass Application of an Electronic Pill (EPill®) <i>Dirk Jansen, Nidal Fawaz, Daniel Bau, Marc Durrenberger</i>	363
9 Distributed and Network Systems	
Reconfigurable Hardware for optimizing Workflows in Networked Nodes <i>Dominik Murr, Felix Mühlbauer, Falko Dressler, Christophe Bobda</i>	373

Dynamic Software Update of Resource-Constrained Distributed Embedded Systems <i>Meik Felser, Rüdiger Kapitza, Jürgen Kleinöder, Wolfgang Schröder-Preikschat</i>	387
Configurable Medium Access Control for Wireless Sensor Networks <i>Lucas F. Wanner, Augusto B. de Oliveira, Antônio A. Fröhlich</i>	401
Integrating Wireless Sensor Networks and the Grid through POP-C++ <i>Augusto B. de Oliveira, Lucas F. Wanner, Pierre Kuonen, Antônio A. Fröhlich</i>	411
10 Panel	
Modeling of Software-Hardware Complexes <i>K.H. (Kane) Kim</i>	421
Modeling of Software-Hardware Complexes <i>Nikil Dutt</i>	423
Enhancing a Real-Time Distributed Computing Component Model through Cross-Fertilization <i>K.H. (Kane) Kim</i>	427
Modeling of Software-Hardware Complexes <i>Hermann Kopetz</i>	431
Software-Hardware Complexes: Towards Flexible Borders <i>Franz J. Rammig</i>	433
11 Tutorials	
Embedded SW Design Space Exploration and Automation using UML-Based Tools <i>Flavio R. Wagner, Luigi Carro</i>	437
Medical Embedded Systems <i>Roozbeh Jafari, Soheil Ghiasi, Majid Sarrafzadeh</i>	441

Preface

This book presents the technical program of the International Embedded Systems Symposium (IESS) 2007. Timely topics, techniques and trends in embedded system design are covered by the chapters in this book, including design methodology, specification and modeling, embedded software and hardware synthesis, networks-on-chip, distributed and networked systems, and system verification and validation. Particular emphasis is paid to automotive and medical applications. A set of actual case studies and special aspects in embedded system design are included as well.

Over recent years, *embedded systems* have gained an enormous amount of processing power and functionality. Many of the formerly external components can now be integrated into a single System-on-Chip. This tendency has resulted in a dramatic reduction in the size and cost of embedded systems. As a unique technology, the design of embedded systems is an essential element of many innovations.

Embedded systems meet their performance goals, including real-time constraints, through a combination of special-purpose hardware and software components tailored to the system requirements. Both the development of new features and the reuse of existing intellectual property components are essential to keeping up with ever demanding customer requirements. Furthermore, design complexities are steadily growing with an increasing number of components that have to cooperate properly. Embedded system designers have to cope with multiple goals and constraints simultaneously, including timing, power, reliability, dependability, maintenance, packaging and, last but not least, price.

The significance of these constraints varies depending on the application area a system is targeted for. Typical embedded applications include multi-media, automotive, medical, and communication devices.

The *International Embedded Systems Symposium (IESS)* is a unique forum to present novel ideas, exchange timely research results, and discuss the state of the art and future trends in the field of embedded systems. Contributors and participants from both industry and academia take active part in this symposium. The IESS conference is organized by the Computer Systems Technology committee (TC10) of the International Federation for Information Processing (IFIP).

IESS is a true inter-disciplinary conference on the design of embedded systems. Computer Science and Electrical Engineering are the predominant academic disciplines concerned with the topics covered in IESS, but many applications also involve civil, mechanical, aerospace, and automotive engineering, as well as various medical disciplines.

In 2005, IESS was held for the first time in Manaus, Brazil. In this initial installment, IESS 2005 was very successful with 30 accepted papers ranging from specification to embedded systems application. *IESS 2007* is the second installment of this conference, establishing a regular bi-annual schedule.

IESS 2007 is held in Irvine, California, at the Beckman Conference Center of the National Academies of Sciences and Engineering. The conference center is located on the campus of the University of California at Irvine. Co-located with one of the leading research institutions on embedded systems, the Center for Embedded Computer Systems at UC Irvine, this IESS conference is a unique venue to establish and foster research relations and collaboration between academic researchers and industry representatives worldwide.

The articles presented in this book are the result of a rigorous double-blind review process implemented by the technical program committee. Out of a total of 64 valid submissions, 35 papers have been accepted for publication, yielding an overall acceptance rate of 54.7%.

Confident about a strong technical program, we look forward to a fruit- and successful IESS 2007 conference,

Achim Rettberg, Mauro C. Zanella, Franz J. Rammig, Rainer Dömer, and Andreas Gerstlauer

Irvine, California, March 2007

Acknowledgements

First and foremost, we thank our sponsors ZF Lemförder GmbH, the Office of Research at the University of California at Irvine (UCI), and the Center for Embedded Computer Systems (CECS) at UCI for their generous financial support of this conference. Without these contributions, IESS 2007 would not have been possible in its current form.

We would also like to thank IFIP as organizational body for the promotion and support of the IESS conference.

Last but not least, we thank the authors for their interesting research contributions and the members of the technical program committee for their valuable time and effort in reviewing the articles.
